Introduction and Approach

WSU-CSANR has compiled state organic crop acreage statistics since 2004, providing annual updates containing current, detailed information for use in farm and business planning, decision making, and risk management. The Washington State Department of Agriculture (WSDA) has historically been the primary certifier working in the state, certifying an estimated 90% or more of the state's annual organic acreage. Oregon Tilth Certified Organic (OTCO) has typically certified 5-8% of the acreage; a few additional certifiers, such as California Certified Organic Farmers (CCOF), Quality Assurance International (QAI), Stellar Certification Services, and International Certification Services (ICS), among others, certified the balance. This publication contains a series of tables with numerical data on organic farm number and acreage (2006-2014), and sales (2006-2013). For related graphical presentations go to the on-line powerpoints posted at http://csanr.wsu.edu/pages/Organic_Statistics.

The USDA Economic Research Service (USDA-ERS) and National Agricultural Statistics Service (USDA-NASS) have also collected state and national information on organic crops when funding has been available; however, publication has typically lagged behind production year. The ERS data are based on certifier-reported values and limited by category, with apples being the sole segregated temperate tree fruit, for example (ERS 2013). NASS administered the 2008 Organic Production Survey (NASS 2010), the 2011 Certified Organic Production Survey (NASS 2013) and the 2014 Organic Survey (NASS 2015). The 2008 and 2014 OPS included both certified and exempt producers; data reported here are for certified producers only. The 2011 survey included only certified producers, but participation was voluntary. Values in the survey results sometimes differ from those reported by the authors, as not all growers participate in the surveys, and not all data are collected in the same manner. For example, the NASS surveys mostly report harvested acres, while this report contains all certified acres with no information about harvest status.

The goal of the CSANR organic statistics reports is to provide timely, detailed, and accurate data regarding certified organic farms in the state to the extent possible. Since certifiers must verify farm acreage, crops, and sales as part of their National Organic Program (NOP) process, their data should be the most accurate available. However, there are some known inconsistencies. For example, the reporting form for sales and yields has changed over the years, and growers have not been entirely clear on what to report.

The acreage numbers present a reliable picture of certified organic crop production in the state. However, growers are not required to register transition acreage (as of 2002), and the reported numbers may underestimate the actual total. Transition acres (land currently managed as organic that has not met the USDA National Organic Program 3-year period of no prohibited materials) are reported here where producers and certifiers opted to provide it. Historically, a large proportion of the reported transition acres have been tree fruit acres. While likely under-reported, these numbers were still useful in predicting growth that occurred in the industry during the last decade. County acreage values are considered estimates because site information from farms with sites in multiple counties has not always been segregated for the specific county.

Table 1 provides an overview of acreage of the major crop categories from 2006-2014. Forage, tree fruit, and vegetables have been the leading categories (% of total column). Total certified area in the state peaked in 2009 and has gradually declined each year since, while total acreage increased in 2014. Area (absolute acres certified) is distinguished from acreage which includes double cropped land, most common for peas and sweet corn in the Columbia Basin. Hay fields harvested or grazed multiple times had area counted just once for acreage.

Table 2 provides details by individual crop, as reported to the certifier. Specific varieties are segregated for apples, pears and grapes. Some producers report different classes of wheat (e.g., hard red, soft white) but typically do not report varieties. Some small, diversified farms report land as ‘Mixed Vegetables’, that cannot be segregated by land area, yield, or sales value for individual vegetable crops.

Table 3 presents the number of farms (certified or transition only) and acres by county for 2014. The percent columns describe what percent of certified farm numbers and acres are within that county (given the caveat above about sites not always being tied to actual county), and are ordered alphabetically first for counties east of the Cascades, and then west of the Cascades. This allows an examination of the organic sector in these two very different agroclimatic regions. Tables 4 and 5 simply track the change in certified farm number and acreage by county over time.

Tables 6a and 6b present farmgate sales estimates as reported by WSDA and OTCO-certified producers; numbers typically do not include handler or processor income, but may include sales of some value-added products from the farm itself. Due to confidentiality concerns, some county sales values are amalgamated with other counties; this has changed over time with the number of farms reporting. There is temporal variability in income period; growers report on calendar, crop or fiscal year basis. Another source of variability is the crop or product marketing period. For example, an apple crop may be harvested in September and sold at various points over the next 10-12 months. Producers differ in the reporting period they choose to use, and thus value for a single apple crop could be split among two different reporting years.

Table values underestimate total Washington organic farmgate income for various reasons: data from other certifiers (e.g. QAI, CCOF, Stellar) are not included, data are not collected from WSDA and OTCO-certified producers who do not recertify in the year following the sales period, and some producer-processor operations do not segregate and report gross farmgate value but, instead, report value-added totals. For example, a producer-processor winery may report the sales value of the wine, but not the value of the grapes. WSDA and OTCO-certified producer farmgate data are not available for a few major producer-processor egg operations and for dairies representing about 10% of organic milkers in the state. Given that much of the missing data are for products (e.g. eggs and poultry) produced in Snohomish and Pierce counties, value for producers west of the Cascades is also underestimated.

Preliminary 2014 WSDA sales data, not included in Tables 6a and 6b, were extracted in October 2015 and indicated that WSDA-certified farmgate sales increased 14% over 2013 values. These WSDA data do not include income of at least \$6 million earned during 2014 by producers who did not renew certification in 2015. The preliminary 2014 WSDA-only sales of \$468 million can be compared to the \$515 million reported in the NASS 2014 Organic Production Survey given that WSDA data also do not include most of \$53 million for fresh eggs, some fraction of \$30 million milk value and a substantial value for organic broilers that are certified by QAI. However, the NASS organic survey values appear to also underestimate actual Washington organic farmgate value, most likely explained by a participation rate of 63% by Washington producers.

Dairy livestock numbers (WSDA, OTCO) were updated and are found in Table 7. Organic dairies in the state expanded rapidly during the mid-2000s as demand for organic dairy products was rising. The number of certified dairies doubled from 2006 to 2008 and then declined 25% during the recession. Despite regulatory changes and shortages of organic feed, organic cow numbers have increased since 2010, and represented just under 3% of the state dairy herd in 2014. In mid-2015, 6 dairies were pending organic certification; these new dairies could add over 500 milkers. Statewide organic milk production rose 28% from 2011 to 2014, both from increased number of cows and a higher per cow production.

The values reported here were compiled from data provided by multiple certifiers, based on farm certification records. All data presented are from certifying bodies accredited by the USDA National Organic Program (NOP). This current report covers acreage through calendar year 2014, and sales through the end of 2013, as reported by producers.

Further detailed organic statistical information compiled by WSU-CSANR is posted online at http://csanr.wsu.edu/pages/Organic_Statistics .

Total 2014 certified land area is 84,848 including 670 ac undefined land (either not cropped or from multiple small cropped sites not entered into crop data base).

Vegetable category includes melons. Certified acre totals include double crop. 2006-2014 crop data include WSDA, OTCO, ICS and CCOF; farm number also includes farms certified by Stellar Certification Services (5) and QAI (1). Crop data not included for 4 farms. Data do not include non-certified exempt farms. The numbers of producers in red font are farms in transition to organic with no certified organic land. Totals may not add exactly due to decimal rounding.

Values were based on land area and did not include identified double crop acres. 2006 acres include data from WSDA, OTCO, ICS, and QAI. CCOF data were added beginning 2006 and partial Stellar acreage included beginning in 2012.

Table 6a. Estimated WSDA and OTCO farmgate sales of certified organic crop and animal products in Washington, by region (east). Counties are grouped to protect confidentiality where necessary. Chelan and Douglas counties are grouped due to a portion of sales reported in Chelan actually representing Douglas.

*Sales data lag acreage data by 1 year; previous year sales are reported on current year producer certification applications. Percent of sales is based on most recent year.

Percent change is based on 2012-2013. All years include sales data from WSDA and OTCO only. No sales data were available for QAI, Stellar or CCOF certified WA farms.

Values were not available for a few OTCO-certified farms in 2007-2009, thus sales were possibly underestimated for King, Klickitat, Lewis, Lincoln, Pierce and Skagit Cos.

Values may not include income from producers who may report all sales as processors.

Table 6b. Estimated WSDA and OTCO farmgate sales of certified organic crop and animal products in Washington, by region (west).
